

7. Steps to export all the logs related to firewall rules to BigQuery for further analysis. Use console.

1. In the GCP Console's navigation menu, find logging under 'STACKDRIVER', then click on 'Exports'.
2. Click on 'CREATE EXPORT'.
3. Set the filter as 'GCE Firewall Rule'. On the right-side, you'll see an 'Edit Export' section. Under that section, Enter an appropriate Sink Name. Select Sink Service as Bigquery and Sink Destination as Create new BigQuery dataset.
4. A pop-up will appear, asking you for the name of the BigQuery dataset. Give it a suitable name and click on CREATE.
5. Now, click on Create Sink.
